We are thrilled to host **Team Science Expert Coaching Sessions** during the afternoons of April 26th and 27th from 1:00PM - 3:00PM PDT.

Registrants have the opportunity to submit questions related to **Team Science, Team Effectiveness, Team Engagement, Community Collaboration, and/or Organizational Dynamics**. This might be practical questions about your current research teams, cross-disciplinary collaborations, clinical teams, or community work. Or, you might ask questions about how to infuse Team Science and Team Effectiveness strategies, theories, or concepts into your current grant proposal. Questions will be reviewed for suitability and you will be assigned a 20-30 minute Coaching Session Slot.

Please note, current DISC Members and DISC Investigators will have preferential review. Coaching Session Slots will be assigned based on question suitability and slot availability.

**EXAMPLE QUESTIONS:**

- My research team would like more flexibility now that we are working remotely to take breaks and have flexible work hours. We’re not sure if this is the best approach given our team members already have a lot of flexibility with their day inherent to remote work. What are some suggestions on maintaining productivity, efficiency, reliability and consistency while accommodating needs?
- I am working with a new expert workgroup on building research evidence around innovative care models in pediatric settings. Workgroup members are very interested in the topic but investment and productivity remains low month to month. How can we build investment and connection between a new community-based team with members from a variety of topic and organizational areas?
- I want to build in team building and collaboration activities into my R01 proposal since I received feedback that this newer team may not be well positioned to lead this cross-sector, community-based project. What strategies or professional development opportunities should I incorporate into the proposal to enhance team rapport?
- When incorporating new members into your project team, what are best practices for communicating clear roles and engaging in communication strategies?
