Emergency Brain Hemorrhages
The FASTEST Study

We need our senior community’s valuable input into an upcoming national study being conducted at UC San Diego. Brett C Meyer, MD, Co-Director, UCSD Stroke Center and Professor of Clinical Neurosciences is joining researchers at more than 100 other hospitals across the United States and other countries to conduct this research study of bleeding in the brain called FASTEST. The purpose of the study is to see if a medicine used to treat and prevent bleeding improves outcomes after a stroke caused by bleeding in the brain. This research study may affect you or someone you know, and we need to find out ahead of time what the community thinks about providing this research option in an emergency. Before the FASTEST research study starts, we are reaching out to communities to provide information, answer questions, and get community members’ thoughts and feelings about this research study.

Please join the presentation and conversation on Monday, April 19, 2021 at 11:00 am PDT. Dr. Anna Barminova will be leading the presentation, and Dr. Thomas Hemmen, the Director of the UCSD Stroke Center will join in.

Meeting Details:

April 19, 2021 – MONDAY
11 AM PT | 12 PM CT | 1 PM ET
Zoom link from your computer or phone:
