Frequently Asked Questions (FAQs) – updated 02.26.18

1. Is my area of research of interest for this RFA?
This RFA is open-ended and does have a direct scientific focus. However, the Center for Epigenomics is seeking collaborative projects which make use of their core technologies, (see http://epigenomics.ucsd.edu).

2. What does “the Center for Epigenomics will invest up to $100K in resources, and expects substantial – and, if possible, roughly equivalent – resources committed by the collaborator.” mean?
Due to their collaborative nature, each project will require significant material investment from both the collaborator and the Center for Epigenomics. This can be in the form of personnel, effort, reagents, etc. from the collaborator. Up to $100k in the form of epigenomic assays, reagents, personnel effort, etc. will be committed from the Center.

3. Are trainees such as Postdocs or Graduate Students eligible to apply?
Sorry. Only full-time faculty members are eligible to submit letters of interest. However, we are always happy to discuss projects and potential collaborative work independent of this RFA. If interested, please contact us at epigenome@ucsd.edu.

4. Can I submit multiple letters of interest?
Yes. We will accept multiple letters of interest from one PI/laboratory. However, only one letter may be selected to move forward to the full application.

For any specific questions or clarifications, please contact Dr. Allen Wang a5wang@ucsd.edu
