FIVE MOST SIGNIFICANT PUBLICATIONS:

This applies to the following series:

- Ladder Rank
- In Residence
- Adjunct (research oriented)
- Research Scientists.

The requirement applies to career reviews:

- Promotions
- Step VI
- Above Scale

Appointees in the Ladder Rank, In Residence, Adjunct and Professional Research Scientist series are required to submit a listing of their five most significant publications when undergoing career reviews (i.e., promotions, Step VI, Above Scale). This does not exclude the submission of a required full bibliography, but puts the burden on the selected publications to satisfy the criterion of creativity. The intent is to reduce the pressure to publish a large number of slight papers and to concentrate on a smaller number of substantive works.

On a separate sheet of paper, list 5 most significant publications since a candidate’s last career advancement or appointment (i.e., since promotion from Assistant to Associate, Associate to Full Professor/Research Scientist.) These are listed with proper citations, corresponding bibliography number and must be either published or in press only. A short statement as to the significance of the publication and the candidate’s role in writing the publication is required. Place an asterisk to the left of each item number on the bibliography and submit a reprint or galley proof with review file. Do not duplicate if already included as part of the reprint package. (Do not send more than one copy of any reprint).
Five Most Important Publications

XXXXXX, M.D., FACOG, FACS

*List of five most significant publications since candidate’s last career review.
*Include a brief description regarding the significance of the article and the author's role.
